## FEHMARN SUND & BÆLT INFO CONTAINER

The new Fehmarn traffic link, connecting Lolland and Fehmarn will become the world's longest immersed road and rail tunnel - And once completed, Scandinavia and Central Europe will be even more closely connected than today. As excavation work continues, many items of historical value and interest are being discovered. The Museum Lolland-Falster is now showcasing the newly unearthed items in an info container supplied by DC-Supply.

The exhibition facilities have been established in a 20-foot insulated container, with a rooftop terrace built with galvanized handrails and frame above it. The rooftop terrace is covered with maintenance-free boarding and is accessed via a spiral staircase installed on one end of the container frame.

The exterior of the info container has a special two-colour paint finish in the customer's own colours, along with customer logo on both sides. Insurance-approved locks have been installed on the container doors, with a large window inserted into one side of the container, thus allowing visitors a little peek inside the container, even outside of business hours.

Inside, the walls, ceiling and doors are all lined with plywood, and the container is equipped with a power pack with a combined relay, switch and 230 V outlet all in one. Main Interior lighting is supplied by two 2 rails along the ceiling with seven LED spots on each rail.

In addition to Femern Sund & Bælt, DC-Supply has had the honour of supplying information containers for among others: Aalborg, Skanderborg and Randers municipalities. We have extensive experience establishing different types and also designs of exhibition facilities in custom-built containers. If you are considering or need a solution of this type, or any other type of custom container for that matter - our experienced staff are ready to assist you further.

Give us a call or send an email if you have any questions, or would like advice. We are ready to help.
