

SPARE PARTS CONTAINER FOR MILITARY USE

The insulated container for spare parts storage is based on our 20ft ISO container

The spare parts container is furnished with high-quality tables and chairs, plus storage sections made in durable, high-quality materials.

The container has interior sandwich panels made of flame-retardant material. Externally, the container is connected to the electricity supply through a built-in strong steel box. The container is designed with a bright double entrance that can be locked.

The container has a special built-in electrical panel connecting heaters, sockets, etc., and durable ceiling-mounted fluorescent lighting fixtures.

- Extremely flexible and grounded rail system for fitting racks, etc.
- Crane, platform, and stairway can be specially designed
- Floor provided with connection to ground
- Electric heating panels
- Option for further connection of electricity supply
- Vinyl flooring extends 10 cm up the walls for easy cleaning
- Front section and electrical installation prepared for the installation of air conditioning
